VERONIKA ROSICOVA

FRONTEND DEVELOPER

Edinburgh • www.linkedin.com/in/veronikaros

PROFESSIONAL SUMMARY

Frontend/React Native engineer with 8+ years' experience who owns quality: testing, accessibility and design systems for regulated fintech. Known for spotting what slows a team down and building the fix, from shared AI tooling to onboarding, and looking for a mid-to-senior role where I can own the quality bar.

· React Native · React · Expo · TypeScript · React Native Web · Redux · Zustand · MSW · GraphQL · REST APIs · Firebase · Reactotron · Jest · ESLint · Prettier · CI/CD · Git · Azure · Accessibility · WCAG 2.2 AA · Figma · Storybook · i18n · Clean Architecture · SOLID · Functional Programming · Agile · Scrum · Jira · Pair Programming · Reqnroll · Gherkin · LLM integration · Claude Code · React Testing Library

WORK EXPERIENCE

Software Engineer, Money Means — Jul 2025 – Oct 2026

- Primary frontend engineer on the UK's first AI-powered financial adviser app: built the React Native/Expo frontend, from Open Banking account connection and sync to the debt, pension and investment-risk tools.
- Owned quality for the mobile app: took it from zero automated tests to 91% line coverage while the codebase grew twelve-fold, writing 43% of the test files, introducing MSW for API mocking and building acceptance-criteria test authoring into the workflow so agreed business rules are verified, not assumed.
- Led accessibility across the app and component library: audited forms, controls, indicators and scrollable regions against WCAG and wired the checks into CI so regressions fail the build.
- Built LLM-to-calculator bridges with guardrails that keep AI output out of regulated advice paths, balancing conversational UX against deterministic, FCA-compliant logic.
- Multiplied the team's output: built shared AI tools for ticket authoring from Figma and for local and PR-environment testing, ran parallel AI-assisted delivery, created the buddy system for new starters, and was recognised by my manager for attention to detail and quality.
- Architected the React Native component system behind the app: Storybook-documented, built on design tokens, with accessible financial UI patterns (forms, controls, indicators) and story coverage enforced in CI, so every new feature was composed from consistent, tested parts.

EARLIER EXPERIENCE

React Native Developer, Zonal — Jul 2024 – Jul 2025

- Delivered iOS and Android features in TypeScript, React Native & Redux for a hospitality product. Raised CI/CD test coverage, led accessibility workshops, refactored legacy code and mentored junior developers on testing & architecture.

App Developer, Pets at Home — Aug 2023 – Mar 2024

- Built customer-facing features for the Pets at Home mobile app, integrating native modules (maps, animations, secure storage) and leading internal sessions on inclusive mobile design.

Mobile Developer, Oak Engage — Oct 2021 – May 2023

- Shipped cross-platform React Native features from prototype to production for an employee engagement app, including store releases and native auth and push notifications. Enforced linting and test standards in the build pipeline.

Web/App Developer, People's Energy — Aug 2020 – Sep 2021

- Extended a React Native codebase to web with React Native Web. Improved state management and data performance with GraphQL and strong typing, and reworked key journeys for accessibility and mobile responsiveness.

Frontend Web Developer, Com Laude — Dec 2017 – Aug 2020

- Built accessible, modular UIs in modern JavaScript and designed and maintained the component library that unified the visual identity.

EDUCATION

BSc in Web Design and Development, Edinburgh Napier University
